OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho Salmon	8/3/96		7		<input checked="" type="checkbox"/>
Coho Salmon	9/20/96		29		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Two baited minnow traps were set at 0730 on 8/3/96, in the upper area of Glen's Ditch off of Wilson Road. After a six hour soak; 7 coho salmon fry were captured. This is marginal rearing habitat, better habitat may occur upstream but time did not allow for further sampling. Two baited minnow traps were set at 0805 on 9/20/96 on both sides of the culvert under the airport access road. After an approximately four hour soak 27 coho salmon fry were captured, along with a large number of sticklebacks.
